## Atomic Rules Renews Community Membership in the Open Core Protocol International Partnership

**AUBURN, NH – November 29, 2010** – Atomic Rules LLC announced today that it has renewed its position in the Open Core Protocol International Partnership (OCP-IP) as a community member, to actively participate in the implementation and evolution of the standard.

“OCP-IP along with ARM® AMBA/AXI4 are the dominant RTL interfaces standards of the day. Our clients demand provably-correct interoperability among these standards. ”, said Shep Siegel, CTO of Atomic Rules.

By supporting OCP-IP, Atomic Rules provides transactional safeguards around conventional RTL interfaces. Atomic Rules advocacy of standards, in conjunction with Electronic System Level (ESL) design tools including Bluespec™ SystemVerilog (BSV), has provided solutions to diverse problems of complex-concurrency.

Atomic Rules LLC is a New Hampshire based consultancy that provides strategic capabilities for reconfigurable computing.
